Digital Literacy Project Report

Name: Sonam

Registration Number: 25BCY10073

Course: B.Tech

University: VIT Bhopal University

Course Code: CSE0001

INTRODUCTION

This project is based on the concept of digital literacy, which is an essential skill in today's digital world. As a student digital ambassador, the goal of this project is to understand and demonstrate the use of digital tools, online platforms, and safe internet practices. The project includes various tasks such as creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, writing professional emails, and understanding cybercrime awareness.

Through this project, I gained practical knowledge about maintaining a professional online presence and using digital platforms responsibly. It also helped me improve my communication and technical skills, which will be useful in my academic and professional journey.

Task 1: Infographic

In Task 1, I created a digital literacy infographic using Canva. The infographic was designed to spread awareness about the importance of digital literacy among students. It includes key topics such as safe internet practices, useful digital tools, and maintaining a professional online presence.

While creating the infographic, I focused on keeping the design simple, visually appealing, and easy to understand. I used icons, colors, and short points to make the information clear and engaging. One challenge I faced was selecting the right content and organizing it properly within a single page. However, it was interesting to learn how visual content can effectively communicate important information.

This task helped me understand how to present ideas creatively and improve my design skills using online tools.

Task 2: Digital Portfolio

In Task 2, I created and updated my profiles on digital platforms such as GitHub and LinkedIn. These platforms are important for building a professional online presence and showcasing skills and achievements.

On GitHub, I created a profile README that includes my basic details and learning goals. On LinkedIn, I added my educational information such as my degree, university, and expected graduation year. I also explored how these platforms are used for networking and career opportunities.

This task helped me understand the importance of maintaining a digital identity. It also motivated me to keep updating my profiles and use these platforms actively in the future. Over the next four years, I plan to use these platforms to share my projects, connect with professionals, and explore internship opportunities.

Task 3: Platforms

In Task 3, I explored coding and collaboration platforms. I created an account on HackerRank and solved a beginner-level problem. This helped me understand the basics of problem-solving and coding practice.

I also created a digital literacy quiz using Google Forms. The quiz included five questions related to digital literacy and safe internet practices. I shared the form and collected responses to understand how such tools can be used for learning and interaction.

This task helped me learn how to use online platforms for both technical practice and collaboration. It also improved my confidence in using digital tools for academic purposes. These skills will be useful in completing assignments, conducting surveys, and working on group projects in the future.

Task 4: Email Etiquette

In Task 4, I learned about professional communication through emails and social media. I wrote two formal emails—one to a professor requesting an extension and another to apply for an internship. I ensured that both emails had proper subject lines, polite language, and a clear structure.

I also created a checklist of do's and don'ts for responsible social media use. This helped me understand how online behavior can impact personal and professional reputation.

Poor digital communication can lead to misunderstandings and missed opportunities. For example, sending an email without a proper subject or using informal language can create a negative impression. This task helped me learn the importance of clear and respectful communication.

Task 5: Cybercrime Awareness

In Task 5, I studied phishing as a type of cybercrime and created a case study explaining how it works. I also prepared a prevention checklist to help users stay safe online.

While researching, I was surprised to learn how easily people can be tricked by fake messages and websites. Many users lose money or personal data because they are unaware of such scams.

This task made me more aware of online security and encouraged me to be more cautious while using the internet. One habit I will change is always checking the authenticity of links and messages before taking any action.

Conclusion

This project was a valuable learning experience that helped me understand the importance of digital literacy. I learned how to use different online tools, create a professional digital presence, and communicate effectively. I also became more aware of cyber threats and how to stay safe online.

Overall, this project improved my technical and communication skills and prepared me to use digital platforms responsibly in my academic and professional life.
